

Datum Construction London

Case Study

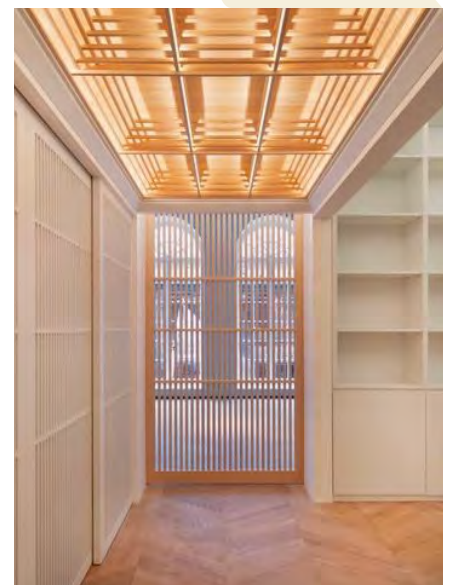

New Stuart Lochhead Gallery 22 Old Bond St, London W1S 4PY

This unique, exacting and prestigious project demonstrated meticulous attention to detail, traditional craftsmanship and a sound ethos of preserving nature and the history around us.

The new Stuart Lochhead Sculpture Gallery was designed by renowned architect Yuichi Kodai of Kodai and Associates. Combining Swiss architectural precision with his cultural richness from Japan, Yuichi Kodai incorporated a Yoshino Wood interior to align the history of the wood with the concept of the Stuart Lochhead Gallery space. This brilliantly draws attention to the immense value and importance of historical art, the creativity of sculptors and the artistry of foresters as they care, preserve and cultivate for the future.

Offering the best up front service with sample sign-offs and options; Datum Construction London were appointed in recognition of their forward thinking approach, quality assurance and company ethos, which connected with the Gallery, Yuichi Kodai and Yoshino Wood. The £500,000 project comprised of a strip out and fitting of the new Gallery interiors.

New Stuart Lochhead Gallery 22 Old Bond St, London W1S 4PY

Before commencing, a structural survey ensured that the structural integrity of the historic building could support the loading of the installations. Access to upper levels was impeded by a slim single staircase requiring careful management; and street parking restrictions added additional challenges that were efficiently overcome throughout the project. All waste was recycled as permitted.

Fitting out included the installation of a distinctive stone table with Italian crafted top, Tabu Wood Veneer hardwood shelving complete with recessed LED strips and bespoke joinery with veneer from Italy. In addition, the carpentry craftsmen installed timber doors and a curved ceiling with decorative slats, using wood from Japan. The

addition of a designer lighting system with controls, bespoke lighting tracks, powered blinds and Wi-Fi were included in the MEP works remit.

In line with Datum Construction's Quality Assurance commitment, the clients need for precise attention to detail was met at all times. Proactive and systematic procedures were implemented and monitored, along with clear guidelines, checks and documentation, to ensure the project meet all of the clients expectations and standards.
